

Joint Initiative on a PSD2 Compliant XS2A Interface

NextGenPSD2 XS2A Framework

Changes from Version 1.3.12 to Version 1.3.13

31 October 2024

License Notice

This Specification has been prepared by the Participants of the Joint Initiative pan-European PSD2-Interface Interoperability* (hereafter: Joint Initiative). This Specification is published by the Berlin Group under the following license conditions:

- “Creative Commons Attribution-NoDerivatives 4.0 International Public License”

This means that the Specification can be copied and redistributed in any medium or format for any purpose, even commercially, and when shared, that appropriate credit must be given, a link to the license must be provided, and indicated if changes were made. You may do so in any reasonable manner, but not in any way that suggests the licensor endorses you or your use. In addition, if you remix, transform, or build upon the Specification, you may not distribute the modified Specification.

- Implementation of certain elements of this Specification may require licenses under third party intellectual property rights, including without limitation, patent rights. The Berlin Group or any contributor to the Specification is not, and shall not be held responsible in any manner for identifying or failing to identify any or all such third party intellectual property rights.
- The Specification, including technical data, may be subject to export or import regulations in different countries. Any user of the Specification agrees to comply strictly with all such regulations and acknowledges that it has the responsibility to obtain licenses to export, re-export, or import (parts of) the Specification.

* The ‘Joint Initiative pan-European PSD2-Interface Interoperability’ brings together participants of the Berlin Group with additional European banks (ASPSPs), banking associations, payment associations, payment schemes and interbank processors.

1 Introduction

The Berlin Group published its XS2A Framework in Version 1.3.13 on 31st of October 2024. This framework consists of the two Documents

- Operational Rules (still in version 1.3) and
- Implementation Guidelines.

The following account access services are covered by this framework:

This document is covering changes in the new release Implementation Guidelines version 1.3.13 relative to version 1.3.12 of the Berlin Group XS2A framework.

2 Changes in Implementation Guidelines (V1.3.13)

Section	Change	Rationale
4.11.1	Entry added to the Endpoints table for the new extended status endpoint: GET bulk-payments/{payment-product}/{paymentId}/extended-status	CR 118
4.11.5	Entry added to the Endpoints table: GET signing-baskets/{basketId}/authorisations	Clarification
4.14.2	"partiallyAuthorised" added as a supported code for consentStatus.	Erratum
5.3.3.1	The pain.002 reports are providing a status on bulk entries by referring to the related original transactions via payment identification attributes in case some of them have been rejected only. To enable this, the following recommendations were added: • If the bulk entry contains transactions without a reference, which are rejected, then the whole bulk should be rejected. • Banks might make the usage of instructionIds or UETR mandatory for bulk initiations.	CR 118
New Section 5.5	New extended status endpoint. GET bulk-payments/{payment-product}/{paymentId}/extended-status This endpoint is very similar to the normal status endpoint, but adds an "Original Transaction Information and Status" attribute with contains an array that for each rejected transaction shows its status information.	CR 118
6.6.4	"city" attribute corrected to "townName" in Response example.	Errata
11.1	Added new data element "additionalRemittanceInformation" of type Max140Text.	CR 110

Section	Change	Rationale
11.3.	Added the attribute categoryPurposeCode to bulk payments on first level with the condition "n.a.". This means, an ASPSP may open this attribute if applicable.	CR 121
13.1	Added new scope variant "Cancel-PIS" for an authorisation request, and the following note clarifying its use: "Cancel-PIS is an optional scope which the ASPSP can decide to use (whether it does must be specified in the ASPSP documentation). If they do so, it must also be used by the TPP, and the PIS scope then refers only to payment authorisation."	CR 117
14.4	Added the following paragraph to the townName attribute description: "This data attribute might be mandated by ASPSP for certain payment products, e.g. SEPA products, following regulatory requirements."	Clarification
New Section 14.14	Added the new Data Type "Original Transaction Information and Status" which is used by the new bulk extended status endpoint to provide information on the original transactions to which the status report message refers and which have been rejected.	CR 118
14.30	Added new attribute "cardAcceptorName".	Errata
14.37	Fixed typos. Added a Strong Recommendation to the ISODatetime type to only use UTC or UTC offset format. Added the "Category Purpose Code" referring to the related code defined in ISO20022.	CR 111 CR 121
